CITX, Web and Design Systems

Setting the Context

→ CITX is a part of 4 Product Suite

CITX is an advanced **threat intelligence platform (TIP)** for automated ingestion, enrichment, and analysis of **threat indicators (IOC)** across collaborative and bidirectional sharing ecosystems.

→ CITX is used by Cybersecurity Analysts of all skill levels

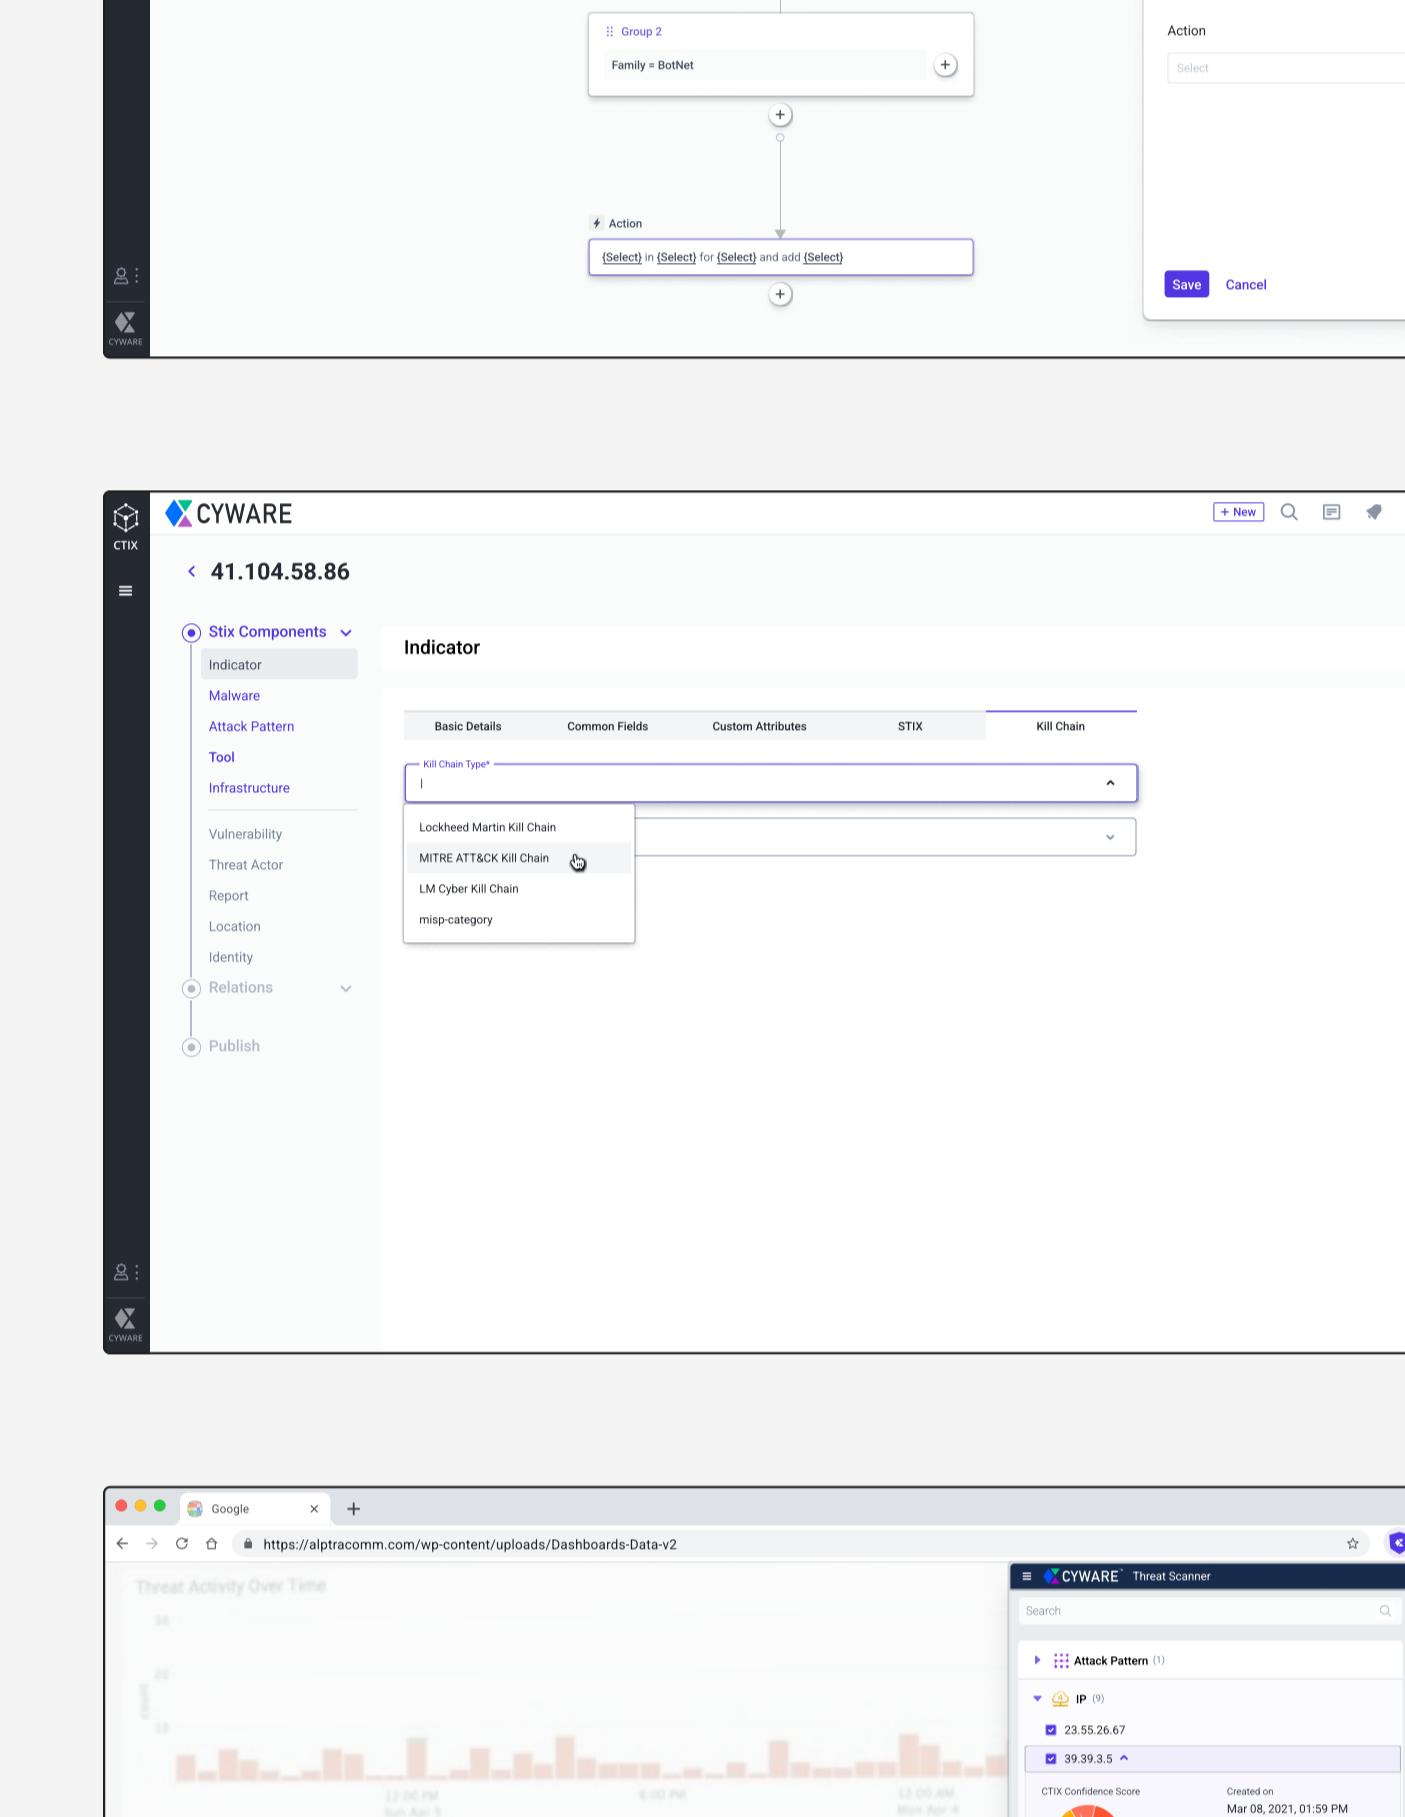

In Traditional Cyber Security Teams, there are Analysts ranging from **Junior to Experts Analysts**

Experts Analysts

Redesigned Components for the new CITX 3.0 Launch

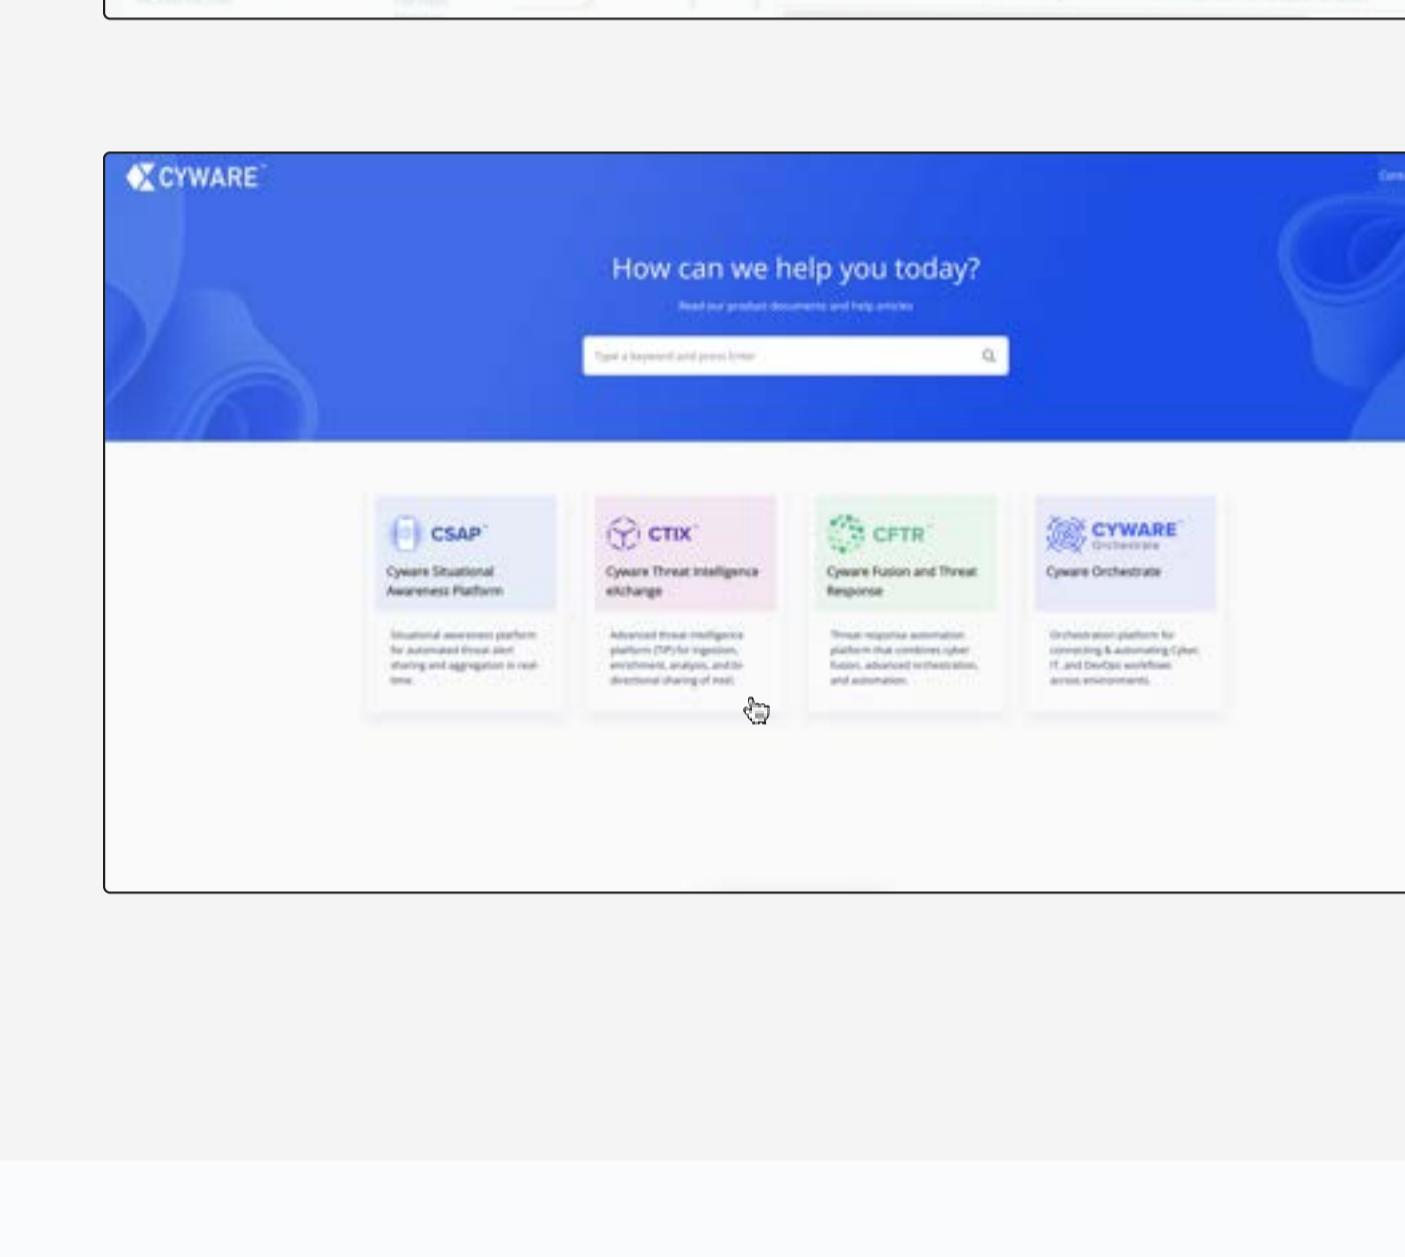

User Onboarding

User Onboarding is the most important aspect of CITX, offering full customisation to each analyst

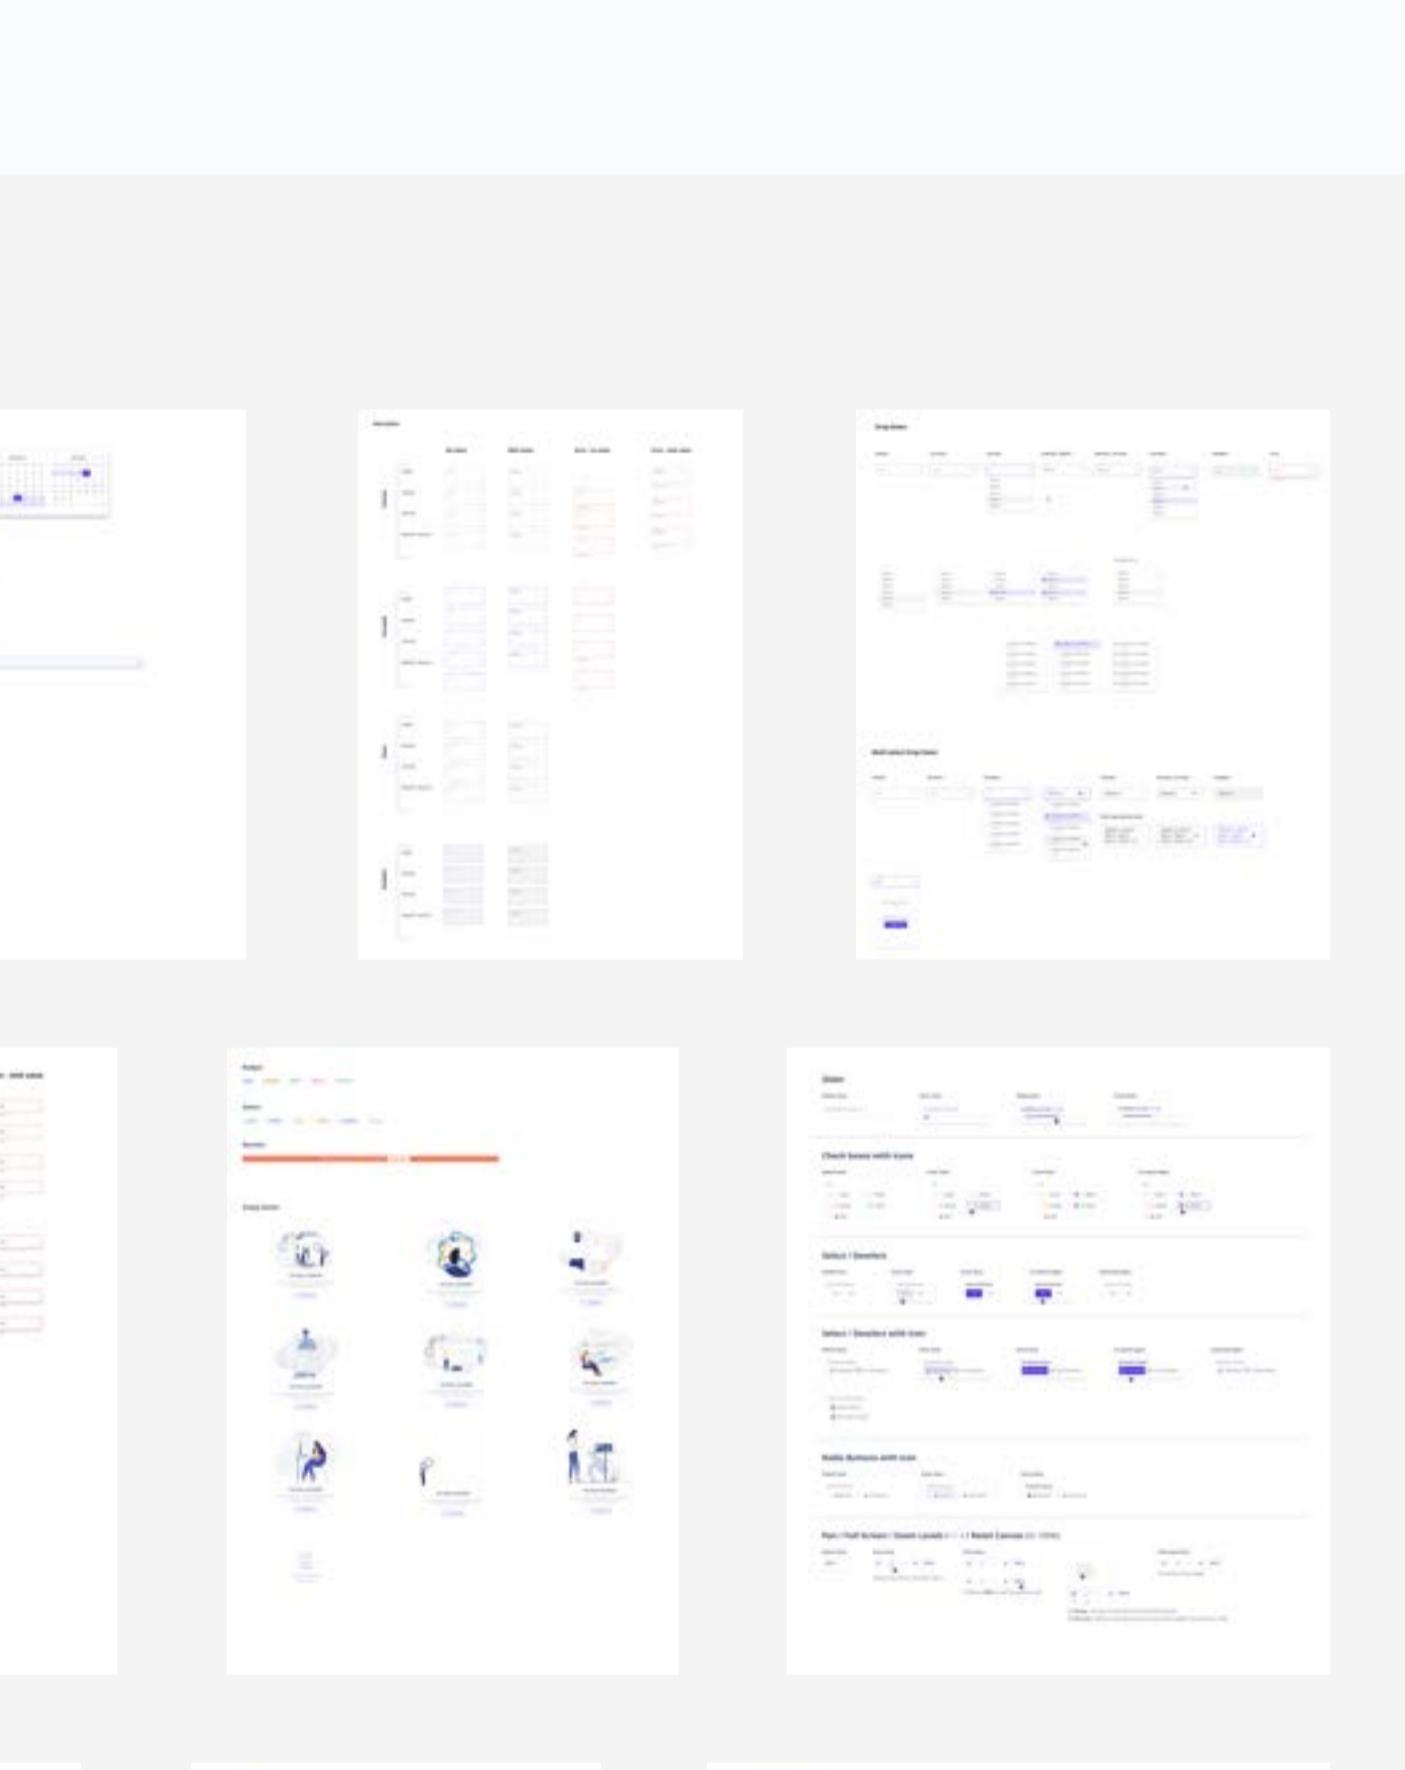

Dashboard

The dashboard/detailed page is the second most used, it provides with quick reference to very complex data

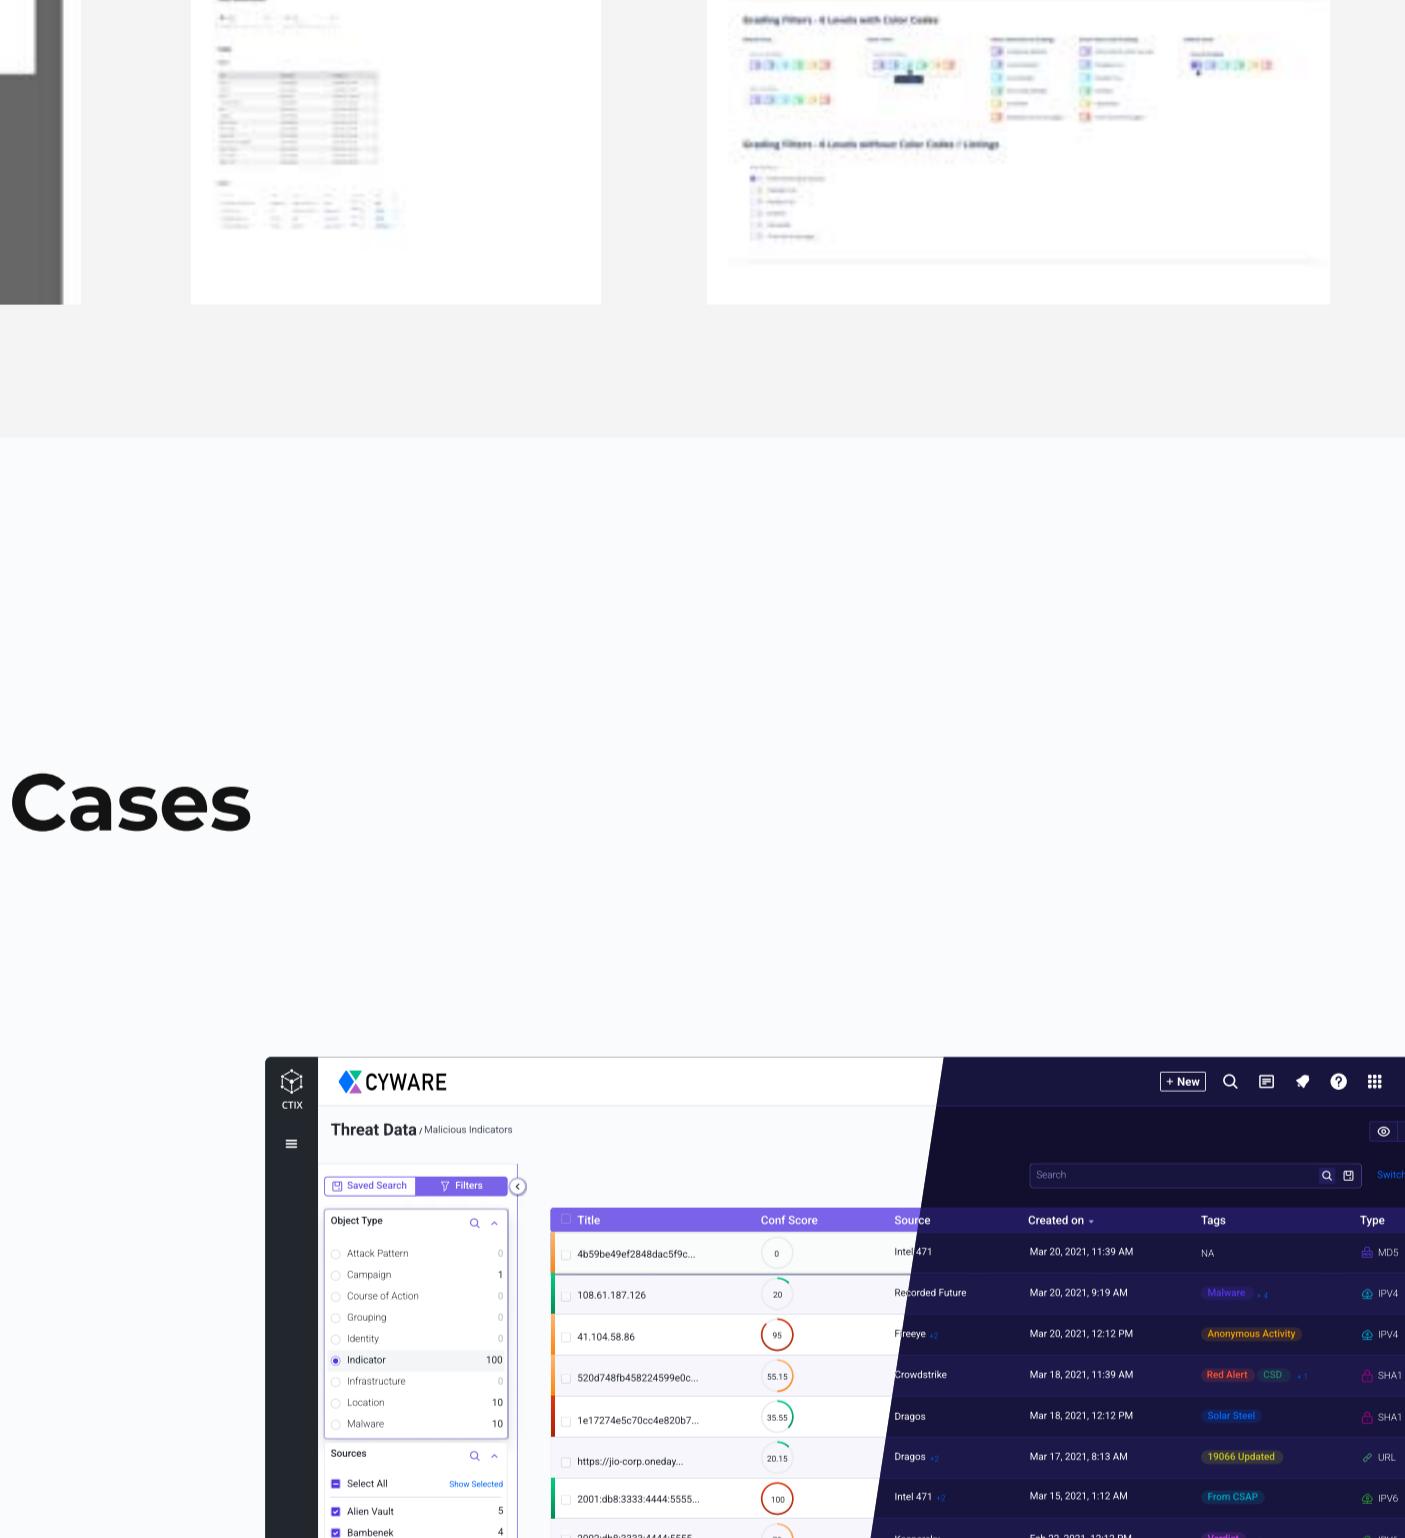

Listing Page

Listing Page is most used component, we build a robust system that could support it

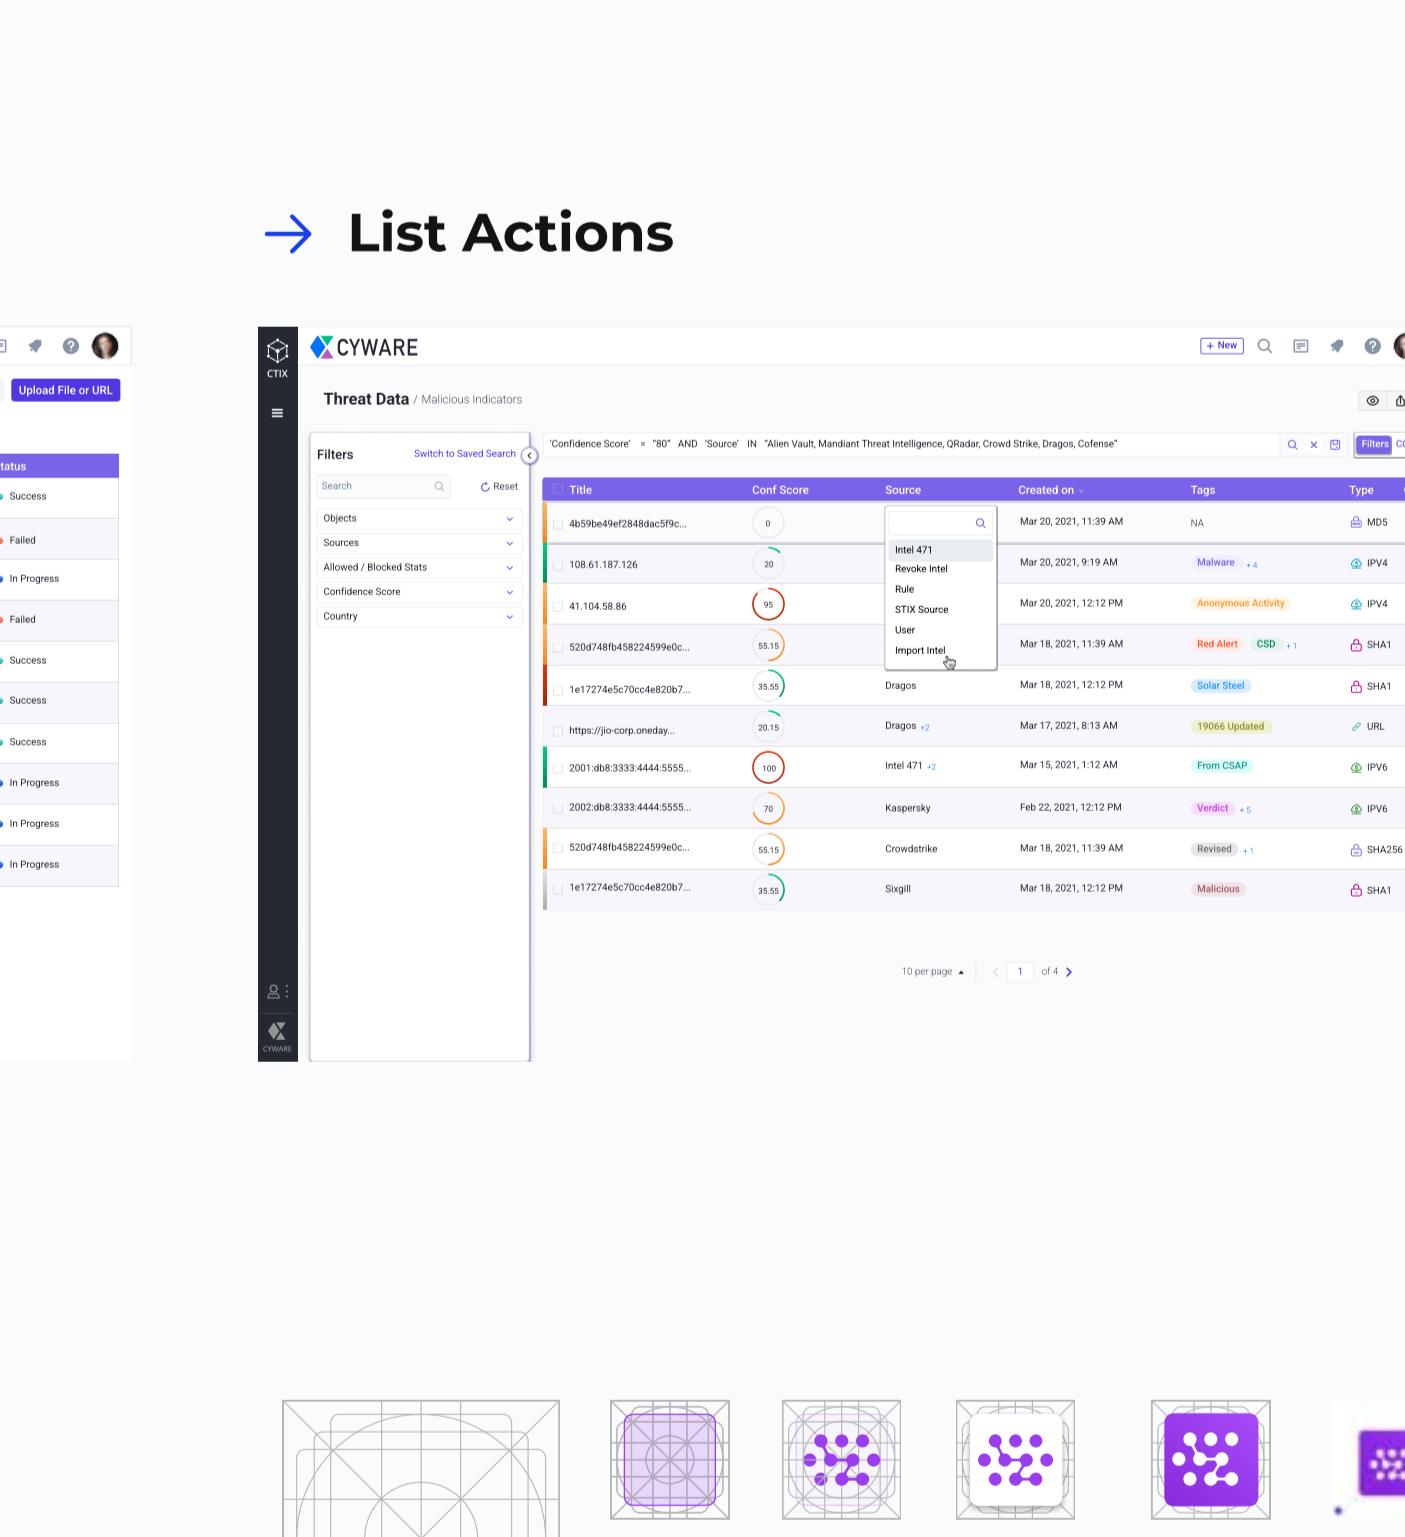

Dark Mode

Dark mode was a special feature request by many of our clients, we delivered it under a quarter

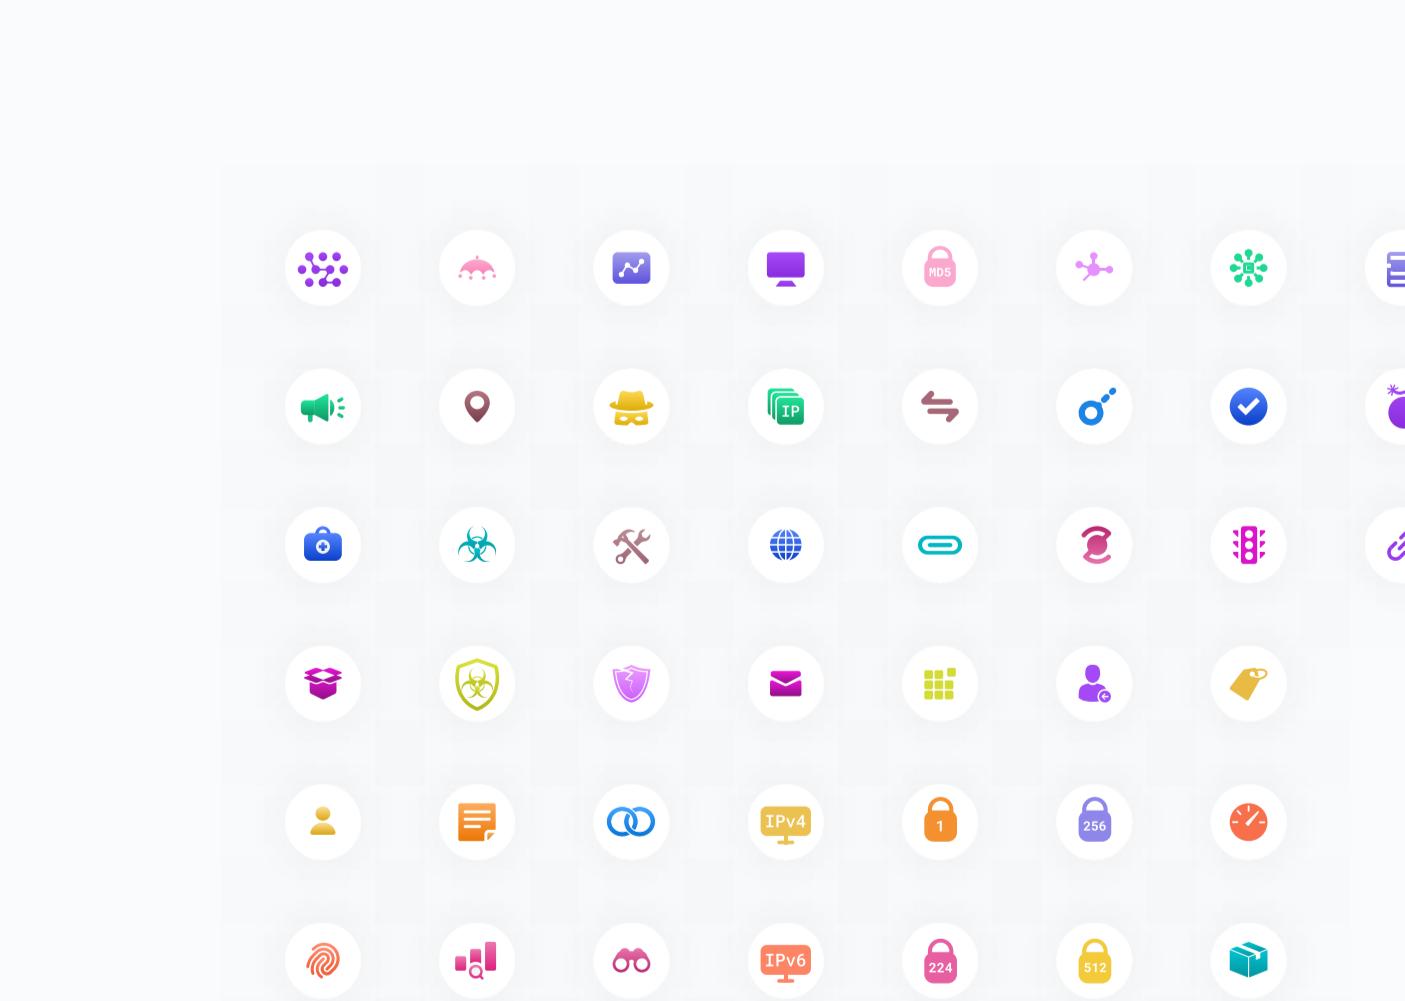

Rules Module

Rules is an automation module used to process, analyze and disseminate data automatically

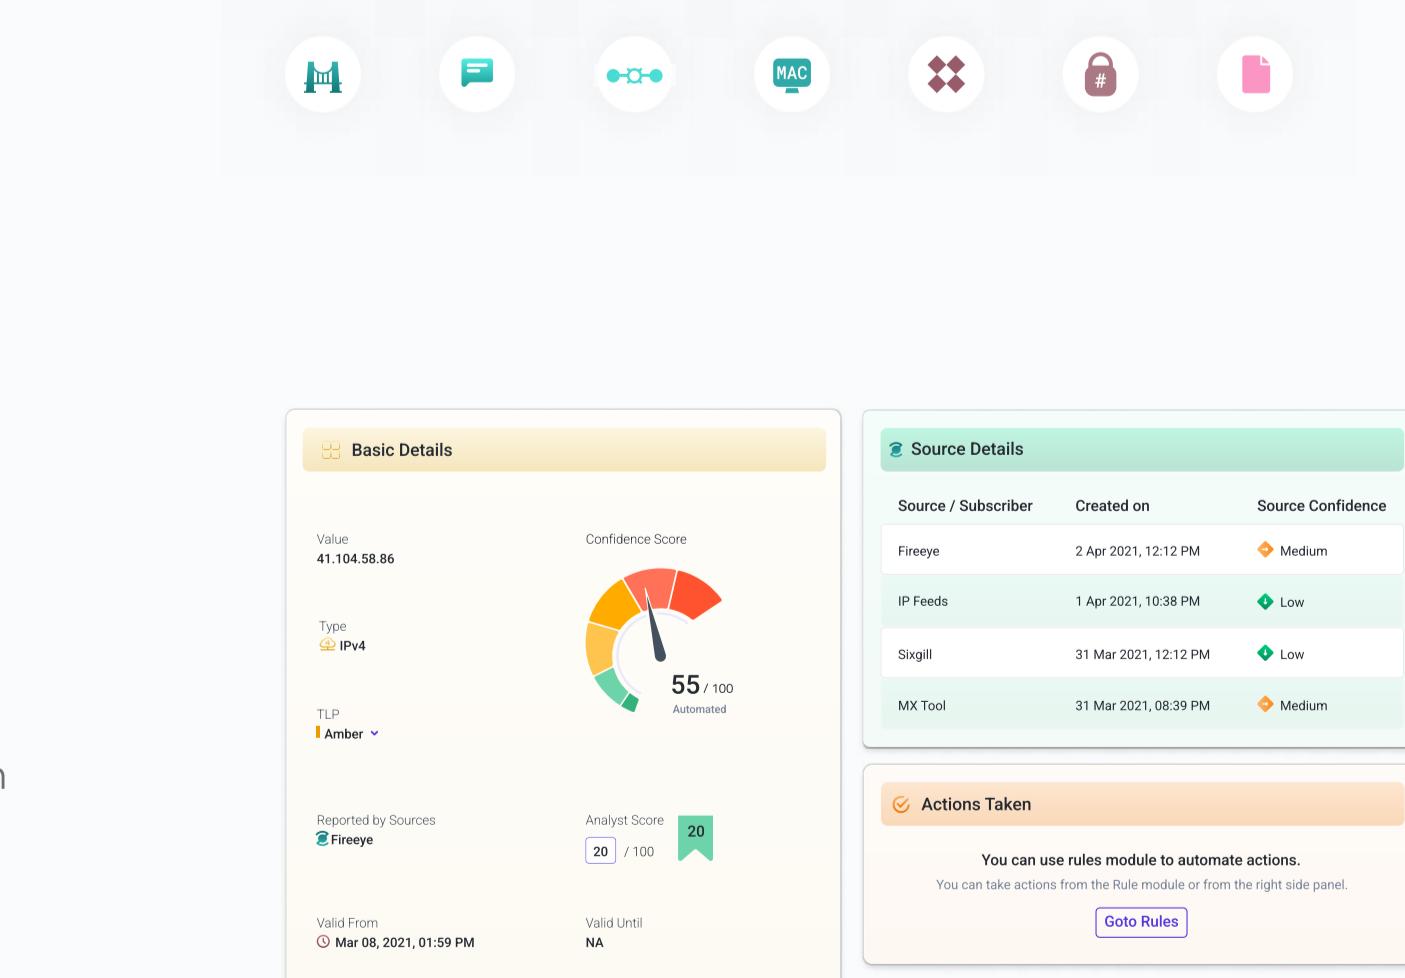

STIX Form

STIX Form is used to create detailed threat reports, they can become extremely complex

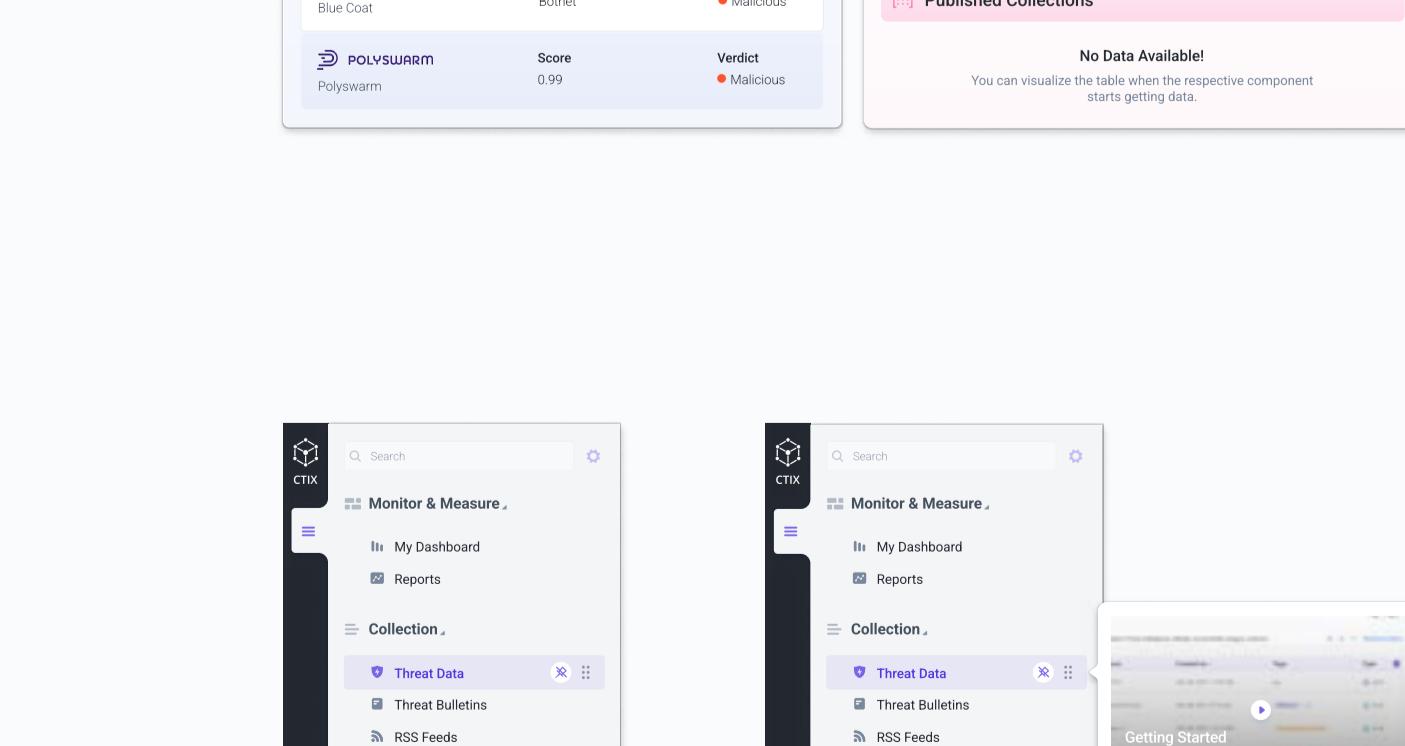

Browser Extension

For Junior Analysts, the browser extension help them quickly load data in CITX without creating detailed reports

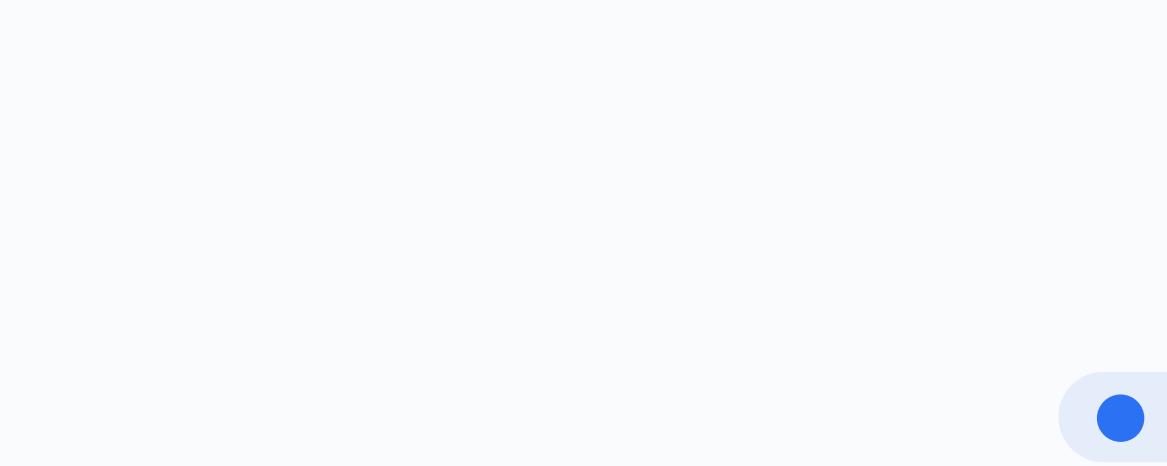

Help Documentation

With the CITX 3.0 Launch we needed a place for all the documentation

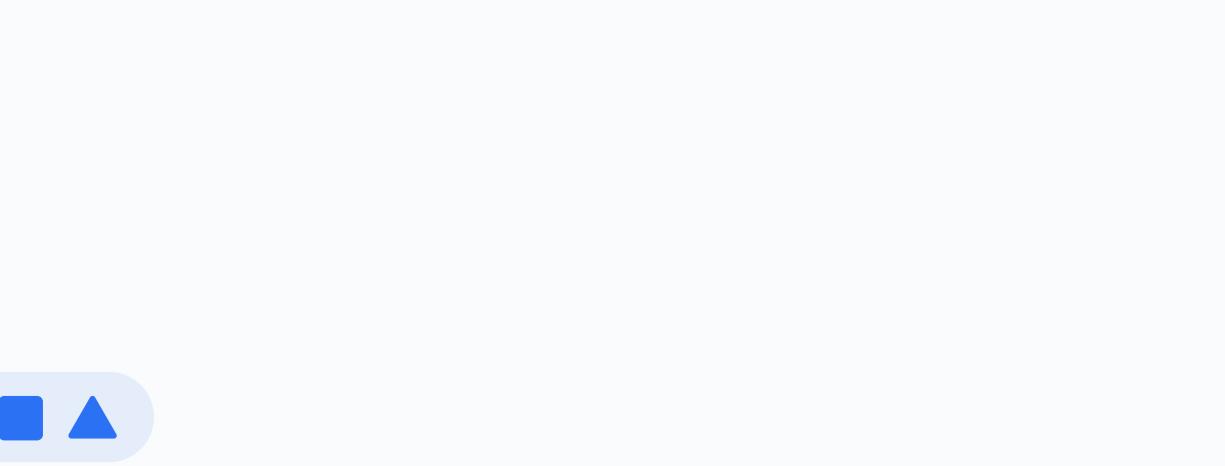

Building a Framework for Design System

→ Overview

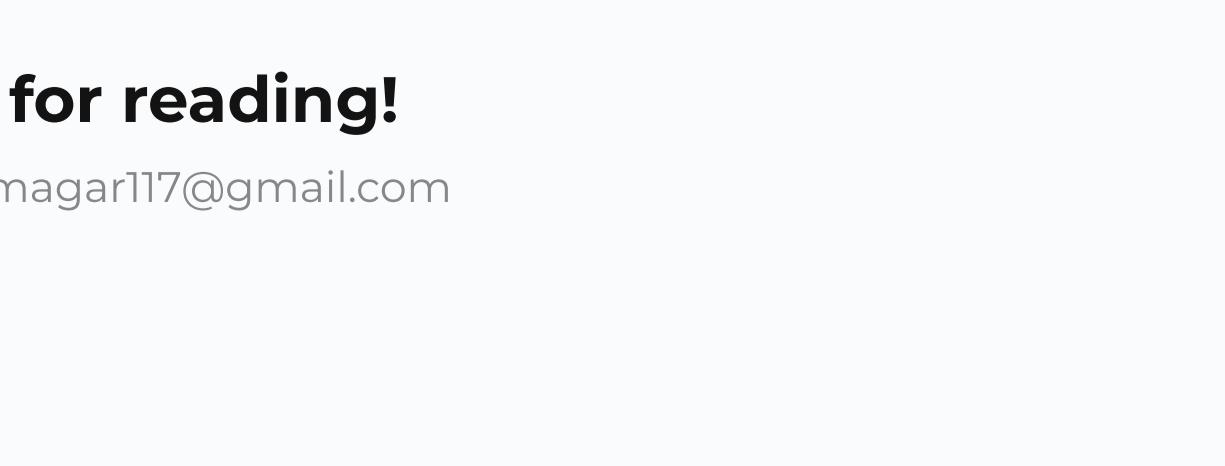

→ List Actions

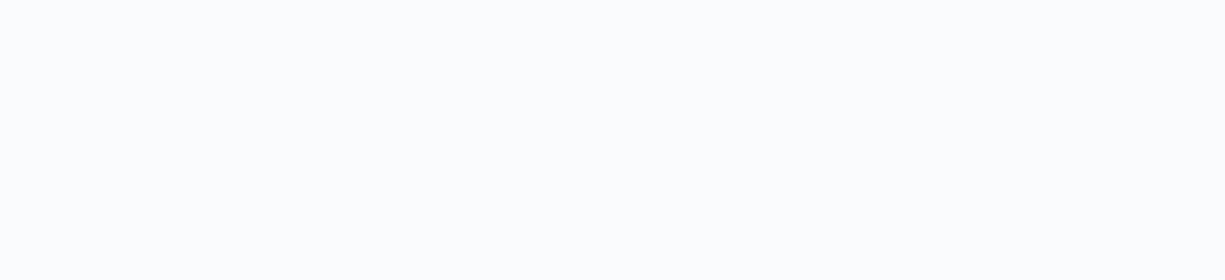

Icon Framework

Icons are used throughout the application, the icon framework helped us create visually consistent icons

Visual Library

Based on the Icon Framework, I created a set of 200+ icons that could be used across the CTIX Product Ecosystem

Stackable Widgets

Widgets are used by analysts to customize their own dashboards

Navigation

With CITX having 60+ Modules, I build the navigation that let users easily navigate the interface
