4 Months Tech Delivery Files Figma Siemens Design System

#### Setting the Context

- Future Grid a scalable and function-focused design system for management of EV Chargers.
- → Future Grid did not meet skateholders' expectations, it's robustness was crucial as prominent OEMs in the e-mobility industry rely on it.

#### **Building a Framework for Design System**

# Challenges and Edge Cases

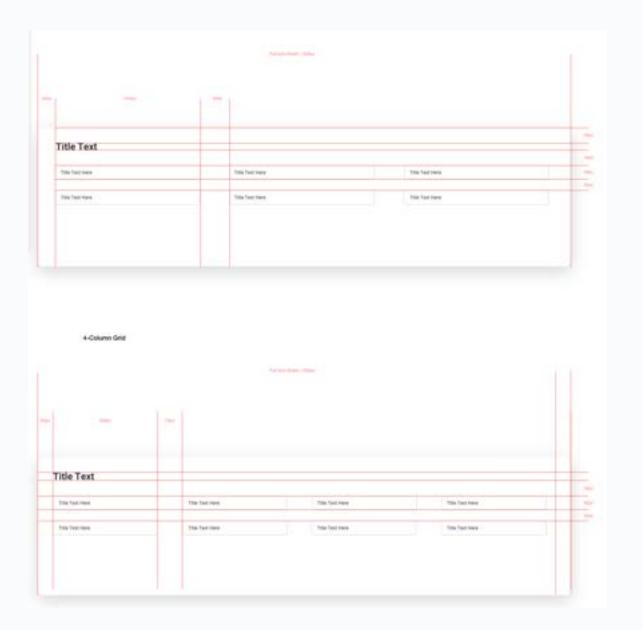

## Optimising for Large Screens

Future Grid is used at EV Warehouses and the technician use screen ranging from 900px to 3240px Wide

## Forms

Forms in Future Grid can range from 4 fields to upto 20 fields, we used a structural approach to build forms that could scale while maintaining usability

## **Adaptive Lists**

Lists are used from device such as phone to large tablets
